ClickSafety launches new website and E-Catalog to meet customers' professional resource needs.

WALNUT CREEK, Calif., April 16, 2013 – ClickSafety, a leading provider of online safety training, is inviting visitors to explore its new website and E-Catalog. The new resource-rich website, www.ClickSafety.com provides the ultimate user-friendly experience and functionality, allowing customers to access detailed course information and videos with the option to share information across all major social channels. Incorporating customer feedback and implementing intuitive navigational capabilities, the new site is designed to serve as a valuable repository where professionals from the construction, transportation and general industries can access safety courses, information and news related to their fields.

Created with the user experience firmly in mind, the website uses the latest technology enabling compatibility with today's browsers and mobile devices.

As a core navigation element, the E-Catalog can be filtered by industry, sub-industry, trade and skill level, so users always have access to the latest and most relevant course information, including downloadable course data sheets and safety course bundles. Among the enhancements is a clear delineation of solutions and information targeted to businesses versus those that are more relevant for individual users. Visitors to the site will be able to quickly and easily find the resources that pertain to them, including course demos and descriptions, industry events, white papers and toolbox/tailgate safety talk videos, client testimonials and industry news. ClickSafety's industry-specific solutions can be viewed in the context of the safety challenges they help solve.

"We're always looking for better, more innovative ways to offer our customers the resources they need to create safer worksite environments," said Brian Tonry, ClickSafety executive vice president and general manager. "That means designing solutions that truly meet their needs and giving them access to important information that affects their industries. Our new web presence allows us to showcase both of those areas. I'm confident the industries we serve will find it very useful."

More information can be found at www.ClickSafety.com.

About ClickSafety

ClickSafety is a leader in online training solutions for the construction, environmental and general industries. It has delivered award-winning interactive safety training to more than 10,000 organizations worldwide and was the first to offer both the OSHA 10-Hour and OSHA 30-Hour safety courses online. ClickSafety's course library has more than 300 courses and 50 courses available in Spanish – developed by certified safety professionals and certified industrial hygienists. Key products include OSHA regulatory training for general industry and construction, as well as several Web-based applications that manage risks associated with training large groups of employees, subcontractors and contract laborers.

ClickSafety was founded in 1999 and is based in the San Francisco Bay area. ClickSafety is a subsidiary of [Ascend Learning](http://www.ascendlearning.com), a leading provider of technology-based educational curriculum and assessment solutions for the healthcare industry and other vocational fields. Ascend is renowned for delivering solutions that produce higher-performing student results at a lower cost, from nursing to health and fitness training to OSHA compliance and training.
